

Penetration Testing Management Report

Prepared For: NEW POS NETWORK PTE. LTD
Target: CRM WEB APPLICATION
Author: PRATIMA MANDLECHA
Date: 03 September 2021
Version: 2.0

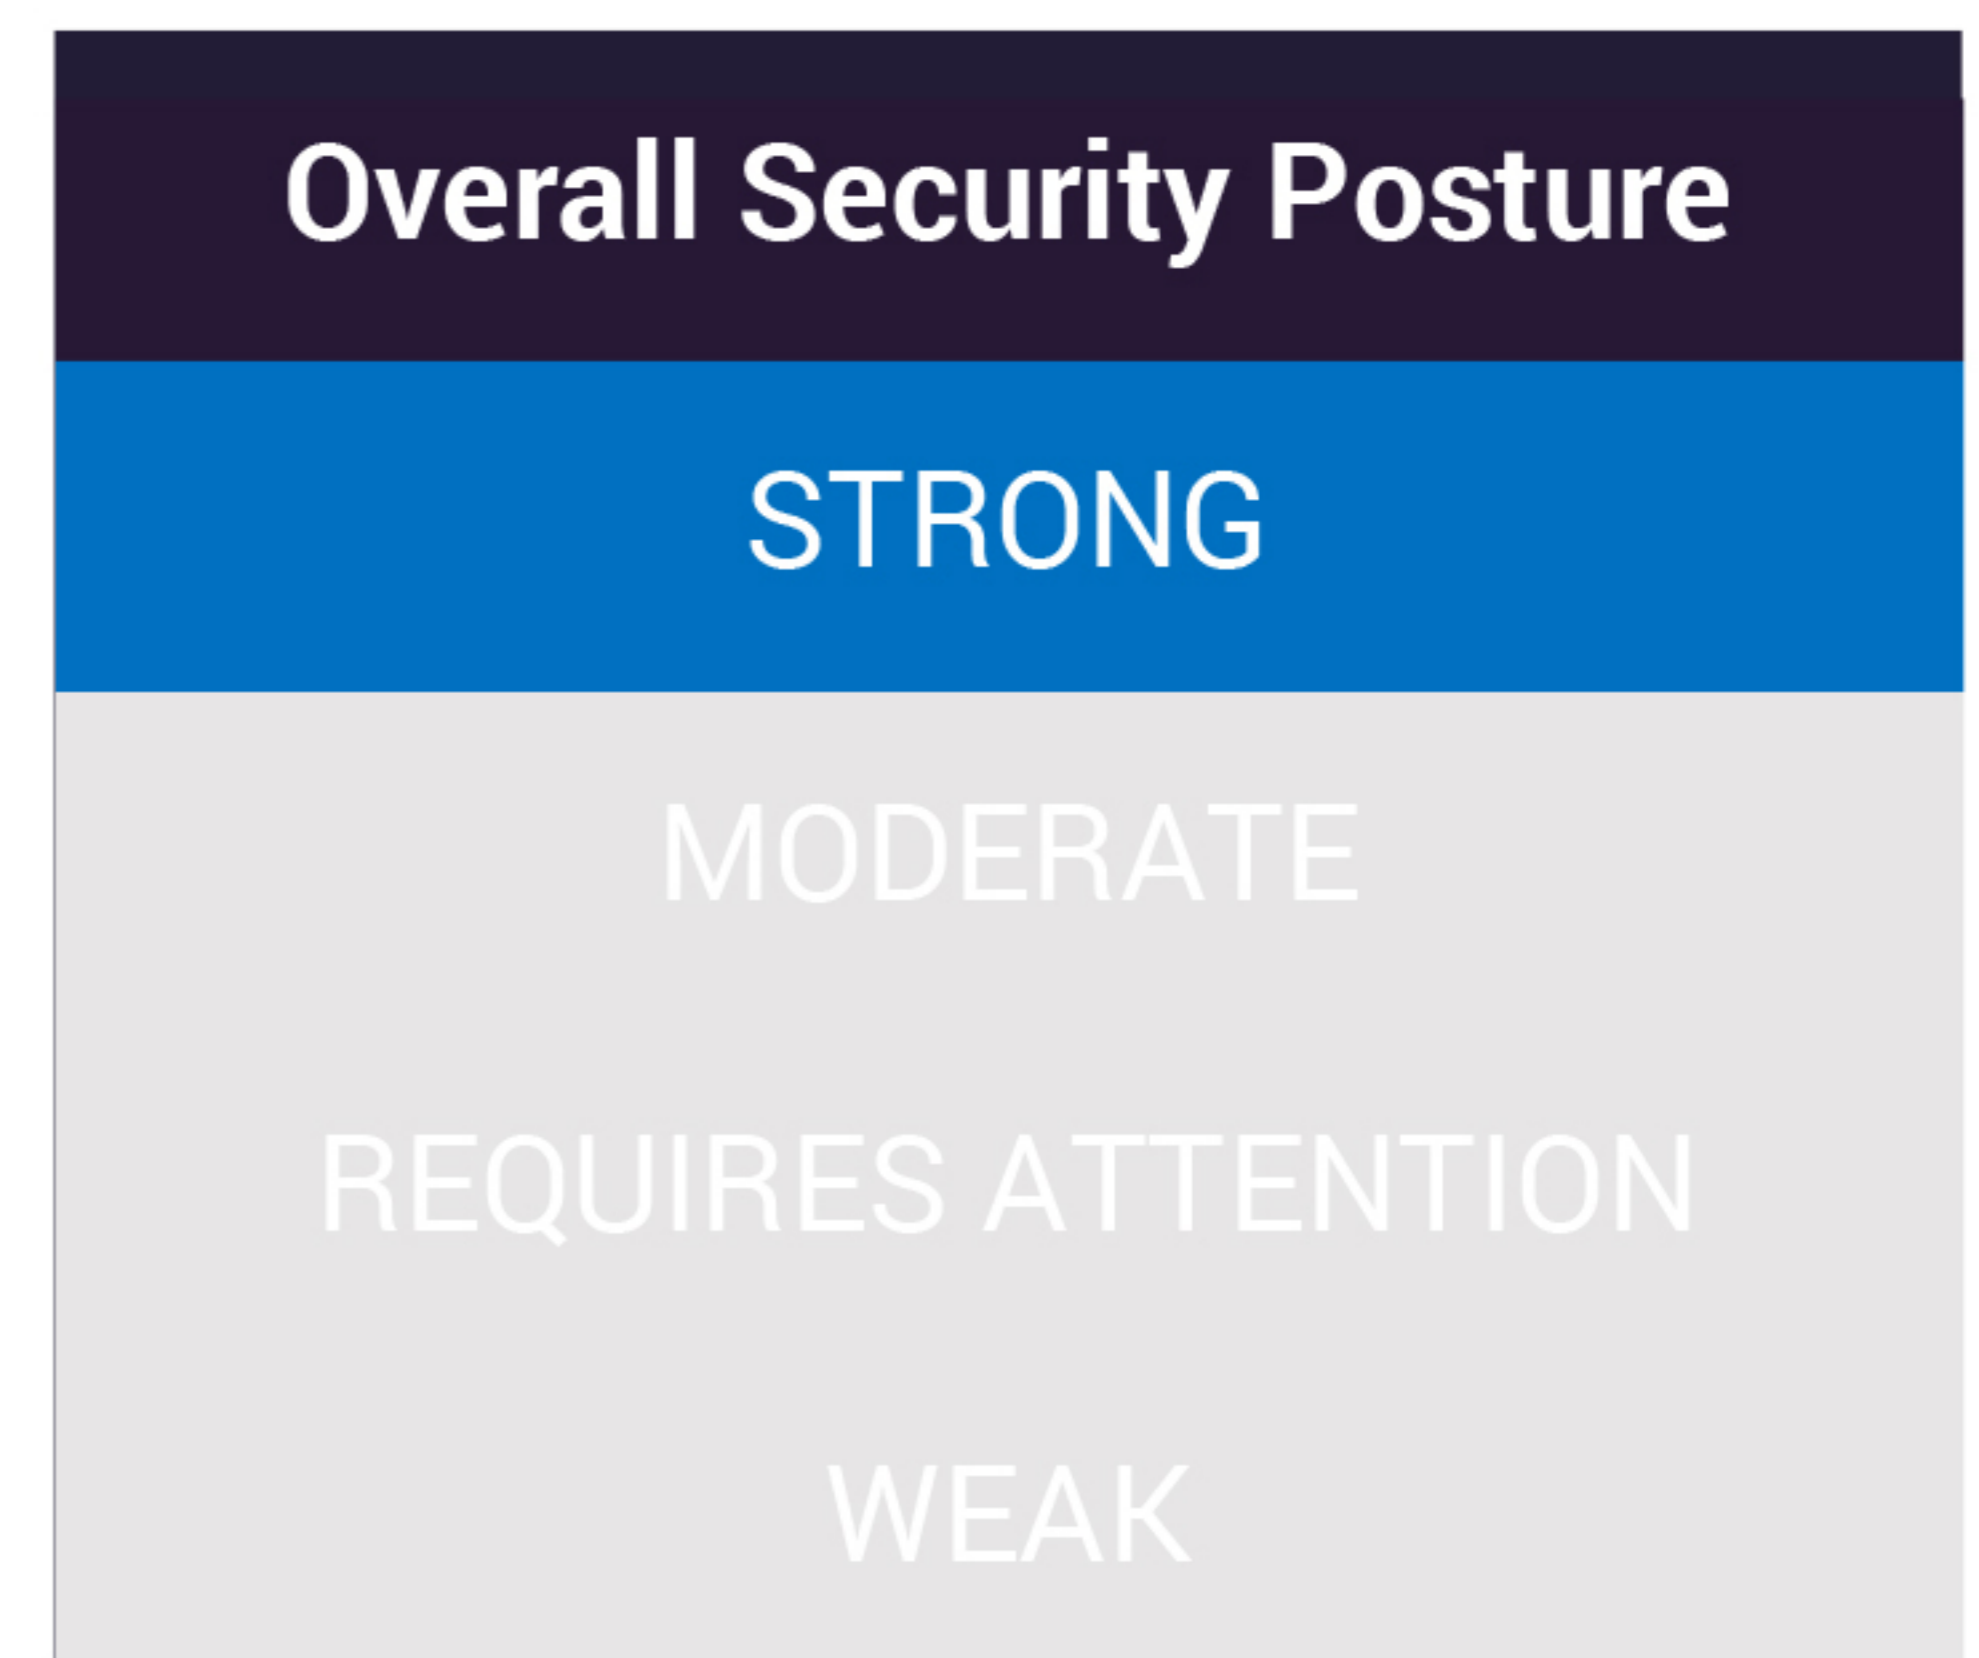

High Level Assessment

New POS Network Pte. Ltd engaged with Nettitude in July 2021 in order to assess the overall security posture of their internal CRM Web Application. In August 2021, Nettitude were asked to review the remediation effort against the initially identified vulnerabilities.

Based on New POS Network Pte. Ltd's risk profile, primary security concerns and the vulnerabilities, Nettitude have found the initial overall security posture to require immediate attention. This has since been adjusted to an overall security posture to be **strong**.

Nettitude were able to:

- Observe strong use of multi-factor authentication.
- Identify outdated JavaScript libraries.
- Identify session timeout issue.

Vulnerabilities by Severity

| | | | | |
|----------|---|--|--|--|
| Critical | 0 | | | |
| High | 0 | | | |
| Medium | 0 | | | |

Constraints and Limitations

No limitations were encountered during the engagement.
